

With Rotate Sky Script, you can easily adjust the rotational speed of the sky. Click on the Sky model through the hierarchy and change the code as you can see in the picture.

Main camera clicked. You will see the free cam script. With the W, A, S, D keys, you can move the camera back and forth. You can rotate the camera when you click the right mouse button. With Movement speed, you can change the movement speed.

You

can give the sky the color you want through the Sky material.
